SUMMARY

Recent Computer Engineering graduate specializing in Python backend development and full-stack systems. Experienced in building production-grade REST APIs with FastAPI and Flask, relational database design with PostgreSQL and SQLite, JWT-based authentication, and integrating AI analytics into real-world applications. Proficient in AI-assisted development workflows using Cursor, Claude AI, and Copilot CLI to accelerate engineering, improve code quality, and navigate complex architectural decisions. Seeking backend or full-stack opportunities where scalable engineering and clean architecture drive impact.

SKILLS

Languages	Python
Backend & DB	FastAPI, Flask, PostgreSQL, SQLite, Firebase
AI & Dev Tools	Anti-Gravity, Cursor, Copilot CLI, Claude AI
Core	Object-Oriented Programming, Data Structures, Git, Shell Scripting, Software Development

PROJECTS

OmniSensus Medical: Clinical Decision Support Backend

Python, FastAPI, PostgreSQL, SQLAlchemy, JWT

- Built a production-grade async REST API using Python FastAPI with Neon PostgreSQL via SQLAlchemy[asyncio] and asyncpg; deployed on Render.
- Implemented JWT-based authentication and role-based access control with bcrypt password hashing using python-jose and passlib.
- Designed modular router architecture spanning 9 clinical domains: auth, patients, doctors, diagnostics, appointments, notifications, admin, ML proxy, and support engineers.
- Integrated ML proxy router to bridge backend with an AI analytics module enabling clinical diagnostics, readmission risk scoring, and AI-powered Q&A for medical teams.
- Enforced strict schema validation with Pydantic models and managed schema evolution through Alembic migrations.
- Secured API documentation behind session-based authentication using HMAC-protected tokens with a 2-hour rolling expiry window.
- Leveraged Cursor and Claude AI throughout development for architecture planning, debugging complex async flows, and iterating on API design.

AI Powered Chat-Bot

Python, Flask, SQLite, Gemini API

- Full-stack chatbot with Python Flask backend and vanilla JavaScript frontend.
- Real-time token-by-token streaming via Server-Sent Events (SSE).
- SQLite for persistent chat history storage and Google Gemini API integration.
- Used AI-assisted prompting (Copilot CLI, Claude AI) to design the SSE streaming pipeline and refine Gemini API integration.

Restaurant POS & Analytics Dashboard

Python, Dashboard, PDF Generation

- Point of Sale system with admin login and product management.
- Analytics dashboard for sales trend visualization with automated PDF invoice generation.
- CSV export for sales reports and structured data management.
- Accelerated development using Cursor and Copilot CLI for boilerplate generation and PDF/CSV export logic.

EDUCATION

Bachelor's Degree in Computer Engineering B H Gardi College of Engineering & Technology	2023 – 2026
Diploma of Education in Computer Engineering Government Polytechnic Jamnagar	2020 – 2023
